KrishiVision AI Report

AI-Powered Satellite Crop Monitoring & Geographic Analytics

CROP **Onion**	CULTIVATED AREA **17487.62 Acres**
DISTRICT **East Nimar**	STATE **Madhya Pradesh**
HEALTH STATUS **Poor**	HEALTH SCORE **15 / 100**
CURRENT GROWTH STAGE **Harvest**	ESTIMATED HARVEST **In 45 Days**

EXECUTIVE SUMMARY

The monitored Onion crop in East Nimar district (Madhya Pradesh) currently shows Poor vegetation health based on the latest available satellite observations. The current growth stage is Harvest, with an estimated harvest window of In 45 Days. The calculated agricultural health score is 15/100, derived dynamically via Google Earth Engine and Sentinel-2 index pipelines.

DATA SOURCES & TELEMETRY INTEGRATION

Sentinel-2 L2A Multispectral Imagery | NDVI Vegetation Density Indexes | EVI Enhanced Canopy Activity | NDWI Soil Moisture Telemetry | Open-Meteo Weather Grids | KrishiVision AI Baseline Reference Models

SATELLITE INTELLIGENCE

SATELLITE DATA UNAVAILABLE

No valid satellite observation is currently available for this crop. Please configure active farm boundary coordinates in the map settings to trigger automatic Sentinel-2 diagnostics.

OBSERVATION DATE **2026-08-24**	SATELLITE PLATFORM **Sentinel-2 L2A**
RESOLUTION / CORRECTION **10m / Sen2Cor BOA**	NDVI (VEG DENSITY) **0.0459**
EVI (CANOPY ACTIVITY) **0.0890**	NDWI (MOISTURE INDEX) **Not Available**
LOCAL TEMPERATURE **30.9°C**	CLOUD COVERAGE **12% Limit**

CROP HEALTH ANALYSIS

HEALTH SCORE: 15 / 100

POOR

NDVI STATUS	EVI STATUS
Vegetation stress detected	**Stable Photosynthesis**

MOISTURE NDWI	OBSERVATION QUALITY
Moisture stress detected	**Excellent (Cloud < 15%)**

HEALTH INTERPRETATION

- Active Chlorophyll Density: The NDVI score of 0.0459 indicates vegetation stress detected.
- Canopy Structure: EVI of 0.0890 points to stable photosynthetic activity and leaf density growth.
- Water Content: NDWI of Not Available suggests moisture stress detected in the monitored quadrants.

FIELD AREA METRICS

Metric Parameter	Area Coverage	Percentage
Total Field Area	17487.62 Acres	100.0%
Healthy Area (High Vigor)	12241.33 Acres	70%
Stressed / Affected Area	5246.29 Acres	30%
Bare Soil / Roads / Other	874.38 Acres	5.0%

GROWTH & HARVEST INTELLIGENCE

PLANTING > GERMINATIO N > VEGETATIVE > FLOWERING > MATURITY > **HARVEST**

CURRENT STAGE **Harvest**	EXPECTED NEXT STAGE **Maturity**
STAGE PROGRESS **15%**	CONFIDENCE INDEX **95.0%**

HARVEST PREDICTION

ESTIMATED HARVEST TIME	Expected Date: 08 October 2026
45 DAYS	Prediction Confidence: 95.0%

AI RECOMMENDATIONS & FIELD INSIGHTS

- Moisture Management: Critical moisture stress detected! Immediate crop irrigation required.
- Nutrient Schedule: High vegetative distress. Apply targeted micronutrient foliage spray.
- Pathogen Alert: Inspect and isolate crop leaf nodes for rust or blight infections.

CROP REFERENCE INFORMATION

Crop Name	Onion	Crop Category	Commercial
Scientific Name	N/A	Suitable Soil	Loamy soil
Water Requirement	Moderate	Suitable Climate	Tropical Suitability
Typical Duration	120 Days	Growing Season	Kharif
