

KrishiVision AI Report

AI-Powered Satellite Crop Monitoring & Geographic Analytics

LOCATION DETAILS	Report ID: KV-NAL-MOO-202608241143
State: Andhra Pradesh	Generation Date: 2026-08-24 11:43
District: Nalgonda, Andhra Pradesh District	Farmer / Owner: Viju

CROP OVERVIEW

Monitored Crop:	Moong(Green Gram)	Total Area:	88957.80 Acres
Crop Health Status:	Poor	Current Growth Stage:	Vegetative Growth
NDVI Value:	0.05	Estimated Harvest:	In 25 Days
AI Model Confidence:	90.0%	ML Model version:	v2.4.0-Live

SATELLITE DIAGNOSTICS & NDVI ANALYSIS

Observation Date	2026-08-24 11:43
Satellite Platform	Sentinel-2 L2A (10m resolution)
Atmospheric Correction	Sen2Cor Bottom-Of-Atmosphere

CROP HEALTH REPORT

Overall Health Status	Poor
Health Index Score	
Vegetation Condition	Stressed / Deficit Canopy
Stress Indication	High Moisture Deficit

GROWTH TIMELINE & CYCLES

Germination	Completed
Seedling	Completed
Vegetative	● CURRENT STAGE
Flowering	Pending
Maturity	Pending
Harvest	Pending

HARVEST PREDICTION

Days Remaining	25 Days
Expected Date	18 September 2026
Confidence Level	90.0%

FIELD / CROP AREA

Total Reported Area	88957.80 Acres
Active Vegetation Cover	62270.46 Acres (approx)
Fallow / Fringes / Roads	26687.34 Acres

CROP REFERENCE INFORMATION

Scientific Name	N/A
Crop Category	Commercial
Suitable Soil	Loamy soil
Water Requirement	Moderate
Suitable Climate	Tropical Suitability
Growing Duration	120 Days

AI RECOMMENDATIONS & INSIGHTS

- Severe crop moisture deficit! Immediate irrigation override recommended.
- Apply systemic fungicide to treat leaf rust.
- Isolate highly infected crop nodes to prevent field-wide contamination.

REPORT AUTHENTICITY VALIDATION

Scan to verify report data, satellite observations, and classification models directly on the KrishiVision platform.
