

KrishiVision AI Report

AI-Powered Satellite Crop Monitoring & Geographic Analytics

LOCATION DETAILS	Report ID: KV-DAM-MAS-202608241227
State: Madhya Pradesh	Generation Date: 2026-08-24 12:27
District: Damoh District	Farmer / Owner: Viju

CROP OVERVIEW

Monitored Crop:	Masoor	Total Area:	56641.41 Acres
Crop Health Status:	Poor	Current Growth Stage:	Harvest
NDVI Value:	0.05	Estimated Harvest:	In 45 Days
AI Model Confidence:	95.0%	ML Model version:	v2.4.0-Live

SATELLITE DIAGNOSTICS & NDVI ANALYSIS

Observation Date	2026-08-24 12:27
Satellite Platform	Sentinel-2 L2A (10m resolution)
Atmospheric Correction	Sen2Cor Bottom-Of-Atmosphere

CROP HEALTH REPORT

Overall Health Status	Poor
Health Index Score	
Vegetation Condition	Stressed / Deficit Canopy
Stress Indication	High Moisture Deficit

GROWTH TIMELINE & CYCLES

Germination	Completed
Seedling	Completed
Vegetative	Completed
Flowering	Completed
Maturity	Completed
Harvest	● CURRENT STAGE

HARVEST PREDICTION

Days Remaining	45 Days
Expected Date	08 October 2026
Confidence Level	95.0%

FIELD / CROP AREA

Total Reported Area	56641.41 Acres
Active Vegetation Cover	39648.99 Acres (approx)
Fallow / Fringes / Roads	16992.42 Acres

CROP REFERENCE INFORMATION

Scientific Name	N/A
Crop Category	Commercial
Suitable Soil	Loamy soil
Water Requirement	Moderate
Suitable Climate	Tropical Suitability
Growing Duration	120 Days

AI RECOMMENDATIONS & INSIGHTS

- Severe crop moisture deficit! Immediate irrigation override recommended.
- Apply systemic fungicide to treat leaf rust.
- Isolate highly infected crop nodes to prevent field-wide contamination.

REPORT AUTHENTICITY VALIDATION

Scan to verify report data, satellite observations, and classification models directly on the KrishiVision platform.
