

KrishiVision AI Report

AI-Powered Satellite Crop Monitoring & Geographic Analytics

CROP Unknown	CULTIVATED AREA 4.30 Acres
DISTRICT Ballari	STATE Karnataka
HEALTH STATUS Good	HEALTH SCORE 87 / 100
CURRENT GROWTH STAGE Needs better image	ESTIMATED HARVEST In 45 Days

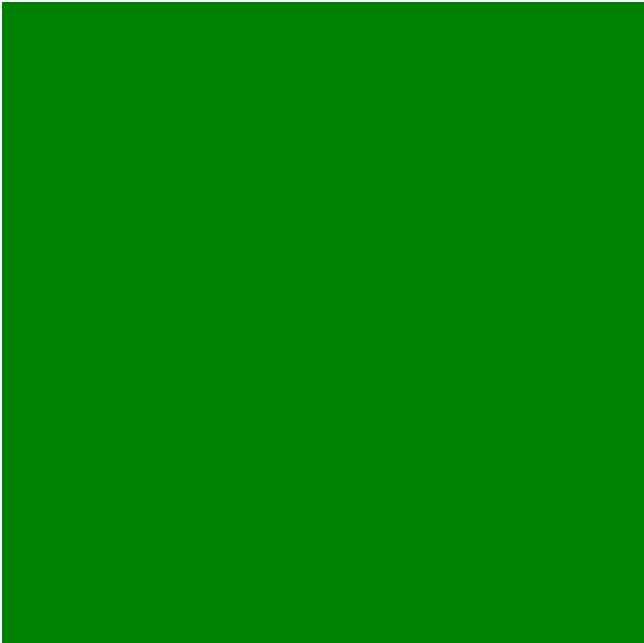

EXECUTIVE SUMMARY

The monitored Unknown crop in Ballari district (Karnataka) currently shows Good vegetation health based on the latest available satellite observations. The current growth stage is Needs better image, with an estimated harvest window of In 45 Days. The calculated agricultural health score is 87/100, derived dynamically via Google Earth Engine and Sentinel-2 index pipelines.

DATA SOURCES & TELEMETRY INTEGRATION

Sentinel-2 L2A Multispectral Imagery | NDVI Vegetation Density Indexes | EVI Enhanced Canopy Activity | NDWI Soil Moisture Telemetry | Open-Meteo Weather Grids | KrishiVision AI Baseline Reference Models

SATELLITE INTELLIGENCE

Truecolor Sentinel-2 satellite observation image for Ballari - Captured on 2026-08-27

OBSERVATION DATE 2026-08-27	SATELLITE PLATFORM Sentinel-2 L2A
RESOLUTION / CORRECTION Not Available	NDVI (VEG DENSITY) 1.0000
EVI (CANOPY ACTIVITY) 0.9000	NDWI (MOISTURE INDEX) Not Available
LOCAL TEMPERATURE 29.0°C	CLOUD COVERAGE Not Available

CROP HEALTH ANALYSIS

HEALTH SCORE: 87 / 100

GOOD

NDVI STATUS Good vegetation density	EVI STATUS Stable Photosynthesis
MOISTURE NDWI Moisture stress detected	OBSERVATION QUALITY Excellent (Cloud < 15%)

HEALTH INTERPRETATION

- Active Chlorophyll Density: The NDVI score of 1.0000 indicates good vegetation density.
- Canopy Structure: EVI of 0.9000 points to stable photosynthetic activity and leaf density growth.
- Water Content: NDWI of Not Available suggests moisture stress detected in the monitored quadrants.

FIELD AREA METRICS

Metric Parameter	Area Coverage	Percentage
Total Field Area	4.30 Acres	100.0%
Healthy Area (High Vigor)	3.78 Acres	88%
Stressed / Affected Area	0.52 Acres	12%
Bare Soil / Roads / Other	0.21 Acres	5.0%

GROWTH & HARVEST INTELLIGENCE

CURRENT STAGE Needs better image	EXPECTED NEXT STAGE Maturity
STAGE PROGRESS 15%	CONFIDENCE INDEX 90.0%

HARVEST PREDICTION

ESTIMATED HARVEST TIME 45 DAYS	Expected Date: 11 October 2026 Prediction Confidence: 90.0%
--	---

AI RECOMMENDATIONS & FIELD INSIGHTS

- Moisture Management: Soil hydration is optimal. Maintain current irrigation feeds.
- Nutrient Schedule: Photosynthetic activity is high. No additional fertigation required.
- Inspection Alert: Continue normal periodic weed clearing and perimeter scouting.

CROP REFERENCE INFORMATION

Crop Name	Unknown	Crop Category	Commercial
Scientific Name	N/A	Suitable Soil	Loamy soil
Water Requirement	Moderate	Suitable Climate	Tropical Suitability
Typical Duration	120 Days	Growing Season	Kharif
