

# KrishiVision AI - Smart Crop Monitoring Report

Farmer: vijayalaxmi

District: Dharwad

Crop: Cotton

Date Generated: Color(0,0,0,1)

## Diagnostics Analytics

| Metric              | Value       | Description                                    |
|---------------------|-------------|------------------------------------------------|
| Crop Health Status  | At Risk     | General vegetation health density index        |
| Growth Stage        | Germination | Current growth cycle estimation stage          |
| Calculated Area     | 2.5 Acres   | Agricultural bounds measured                   |
| Avg NDVI Index      | 0.28        | Normalized Difference Vegetation Index average |
| AI Confidence Score | 91.2%       | Confidence level of deep learning analysis     |
| Harvest Predicton   | 18 Days     | Projected days remaining before harvest        |

## AI Recommendations & Maintenance Actions

- Detected slight chlorosis. Apply nitrogen-rich fertilizer supplement.
- Slight water stress identified in east quadrants. Increase drip feed duration.
- Inspect field bounds for potential early aphid or whitefly infestation.
